## Abstract

- This is a web based system which will be used in a laundry work place to manage the work which are normally done in the place for example the order provided or enquired by the customers who come to the laundry and also advertise the specific services provided by the company through the system, also keep the records of the working staffs of the company and their activity in the place.
- It will also keep the records of the customers but only their important details like name and receipt number which reference their order and this information will be kept only for a specific period of time.
